A family of ducks decides to leave the safety of a New England pond for an adventurous trip to Jamaica. However, their well-laid plans quickly go awry when they get lost and wind up in New York City. The experience soon inspires them to expand their horizons, open themselves up to new friends, and accomplish more than they ever thought possible.

Parameter Sensitivity in the Predication of DNAPL Infiltration and Redistribution in Heterogeneous Porous Media

Tissa Illangasekare, Mini Mathew, Fritjof Fagerlund, Auli Niemi & Tissa Illangasekare
Content published 2006 in [DTU Data](#)

Subsurface heterogeneity has a significant influence on infiltration and distribution of DNAPLs. Numerical models of multiphase flow are limited by their ability to predict behavior of DNAPLs in the field due to lack of accurate data on characterization of heterogeneity. However, these models help to obtain insights into the complex behavior that will be useful in designing effective remediation schemes. A number of multiphase flow codes that have the ability to capture the fundamental processes that control the migration of NAPLs exist. However, the issue of which constitutive model and parameters need to be used in simulating DNAPL behavior at various scales of interest is not studied satisfactorily. With the goal of contributing to the knowledge needed to address this issue, an experimental study was conducted to generate an accurate data set on the migration of DNAPLs in a synthetic aquifer with various combinations of heterogeneous/ homogenous configurations. This paper presents the results of a study where the data from these experiments was used in combination with an existing multiphase code UTCHEM9 to evaluate constitutive model sensitivity to prediction of both infiltration and redistribution. In the experiment, a tank with dimensions 0.71 m x 0.53 m x 0.04 m was packed with two layers. The layer in which the spill occurs was packed using five well-characterized sands to represent a spatially correlated random field with geostatistical parameters; Ln κ of 22.5 (k in m²) and variance of 1. Second layer was homogenously packed with a single sand. The interface between the two layers had a slope of 3.5°. NAPL was injected as point source and saturation distribution was accurately monitored using an automated x-ray attenuation system. Modifications to the code were made to incorporate hysteresis and accommodate layer inclinations. The model simulations were conducted for two phases of the experiment; during NAPL injection and re-distribution for the following cases: (1) Brooks Corey drainage model during the injection and redistribution, without hysteresis and entrapment, (2) Brooks and Corey drainage model during injection and imbibition during redistribution, without hysteresis and entrapment, (3) Parker and Lenhard model with hysteresis, (4) Parker and Lenhard model without hysteresis, and (5) Brooks and Corey drainage model with trapping during injection and redistribution. The analysis shows during injection perio...

DESIGN CHOICE: Support Relevance Decision

Genuine information needs of social scientist

- Online-Survey (72 Social Scientists)
- Task 1: “For answering your current research question, you need quantitative data. You have already searched for data but did not find a suitable dataset yet. You meet a colleague in the coffee corner. You know that your colleague has a great overview of your research topic. You tell her about your struggle to find relevant data. Your colleague offers help and asks you to describe exactly what data or variables you are looking for.”

Genuine information need of social scientist (2)

Request: “I am looking for representative surveys of the population that collects the personal attitudes towards democratic principles.”

Request: “I am looking for data on occupational and financial consequences of the corona crisis on older workers.”

DESIGN CHOICE: Support Relevance Decision

The screenshot displays a research data catalog interface. On the left, a vertical sidebar contains six filter categories: 'Research data (4,113)', 'Variables (1,573)', 'Instruments & Tools (16)', 'Publications (13,459)', 'GESIS Library (1,260)', and 'GESIS Webpages (378)'. The main content area shows search results for 'Migration / Integration'. The first result is 'Current Questions on Migration / Integration (August 2023)', with a link to 'show more filters' above it. The second result is 'Current Questions on Migration / Integration (October 2022)'. On the right side, there are partial views of download and citation options for the data files.

DESIGN CHOICE: Support Relevance Decision

The screenshot shows a web interface for a research data archive. At the top, there is a search bar containing the word 'migration'. Below the search bar, there are navigation tabs for 'Services', 'Research', and 'Institute'. A '< Back' link is visible. A blue button labeled 'Research data' is positioned above the main title. The title is 'Attitudes Towards Values and Religion of Germans With and Without Migration Background and Foreigners in Germany', with 'Migration' highlighted in yellow. Below the title, the authors are listed as 'Neu, Viola; Pokorny, Sabine; Roose, Jochen'. The source is identified as 'GESIS Data Archive, Cologne. ZA7757 Data file Version 1.1.0, https://doi.org/10.4232/1.13766'. An abstract follows, describing a survey conducted between 2018 and 2019, with 'migration' highlighted in yellow. A 'Content' section lists variables such as country of birth, year of move, and nationality. Finally, a 'Topics' section lists categories like 'Government, political systems and organisations', 'Political behaviour and attitudes', 'Religion and values', and 'Migration', with 'Migration' highlighted in yellow.

DESIGN CHOICE: Linking Information

Observational study

- Focus on Dataset search
- 12 Social Scientists
- Observations at their workplaces
- Task: “In the context of your research, you need research data. For today, you decide to start with the search for research data.”

Observational study

- **Key findings**

- Literature search is an important part of dataset search
- Tools are unknown
- Tools are creatively misused
- Relevance assessment is very complex
- Accessibility to datasets is limited
- Dataset search suffers from missing interlinks
- Dataset search literacy is low

Meet the Experts – 11.04.2024
 How knowledge graphs can help you to share research data and information

Take away message

GESIS Search is about searching and finding social science information at one single entry point. It focuses on social science research data and related information which are interlinked and browsable.

We focus on a user-centered design approach, building GESIS Search and its components on the use cases and needs of users.

New design choices ahead...

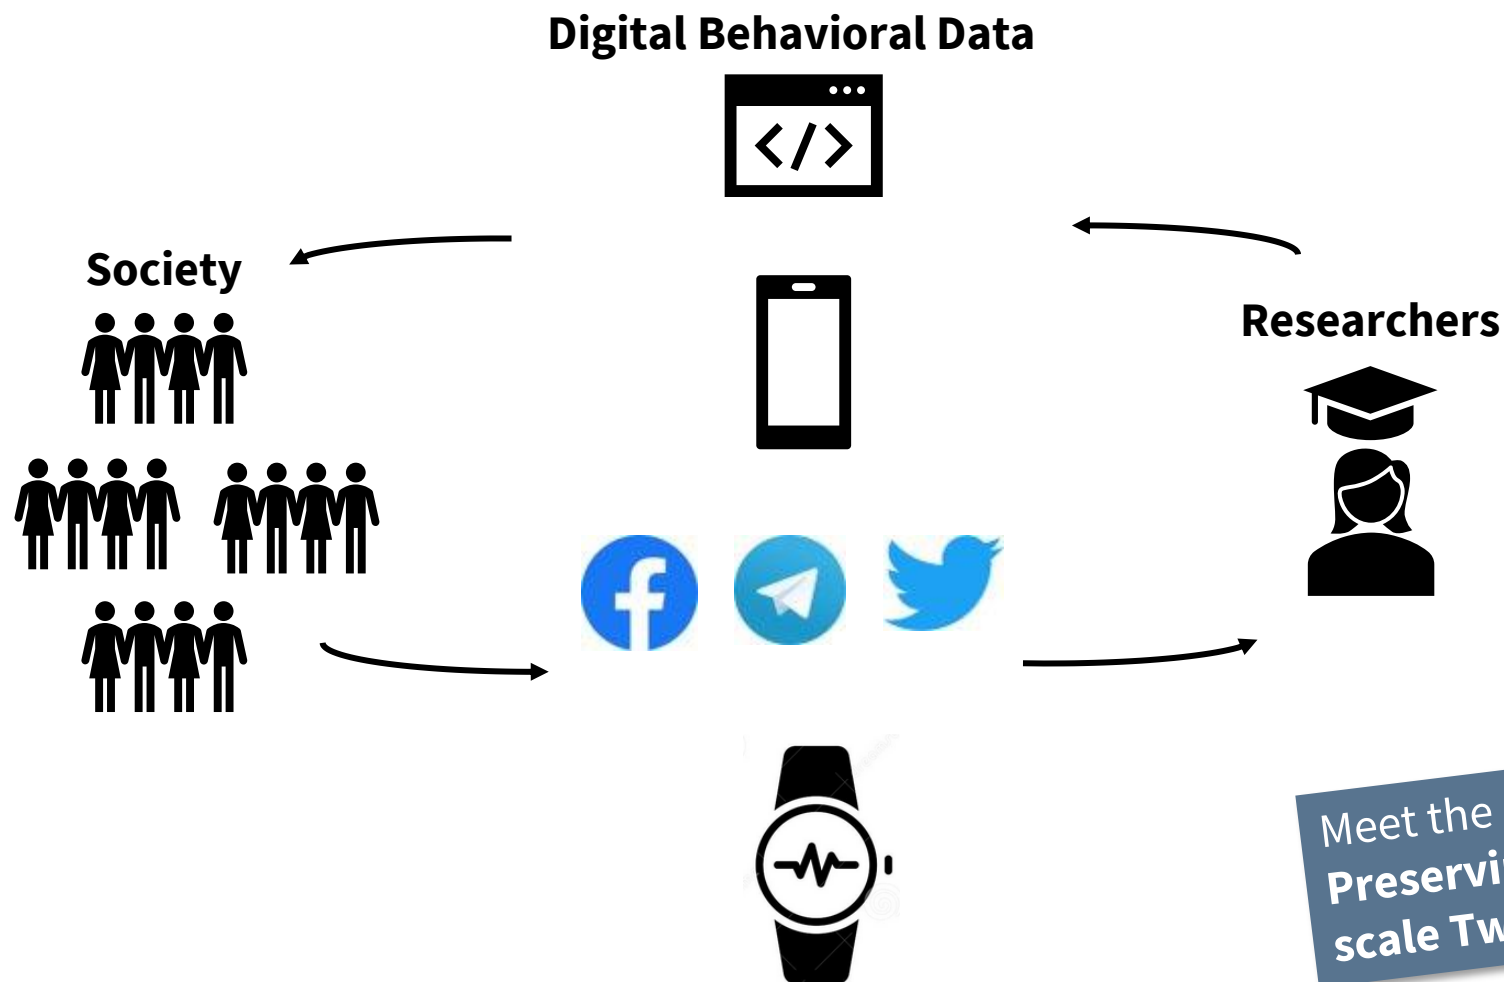

Digital Behavioral Data

New Research Opportunities for the Social Sciences

What is digital behavioral data?

The concept of 'digital behavioral data' (DBD) encompasses digital observations of human and algorithmic online platforms (like Google, Facebook, or the World Wide Web) or sensors (like smartphones, RFID sensors) with concepts of “big data” – with digital behavioral data often sharing their characteristics – or “digital traffic” behavior. “Digital behavioral data”, however, focus on the societally relevant aspects of human and algorithmic behavior from this.
